

EKATO Experimental and R&D Capabilities

Mixing is a standard operation in process technology. But sometimes agitated applications – due to whatever reason – imply difficulties and are far away from standard. In most cases this can be overcome with a clever choice of experiments.

Webinar

April 18,
2024

9.00 – 9.45 am
(CEST)

Free of
charge

We will present our experimental capabilities that we use for finding the best mixing solutions for our customers:

- Laboratory and pilot facilities
- Cold flow testing
- Chemical and physical analytics
- Mobile test equipment
- CFD modelling and scale-up
- Examples

Objectives

In this webinar we will put a spotlight on efficient experimental investigations in order to find the most suitable agitated process solution.

We will show how the results of test programs - with the help of inhouse know-how, scale-up rules and modelling - can be transformed into successful and efficient mixing solutions for our customers.

Target Group

General managers, process engineers, R&D specialists, production managers, buyers, project managers as well as anyone interested in process development, equipment engineering and production improvement.
